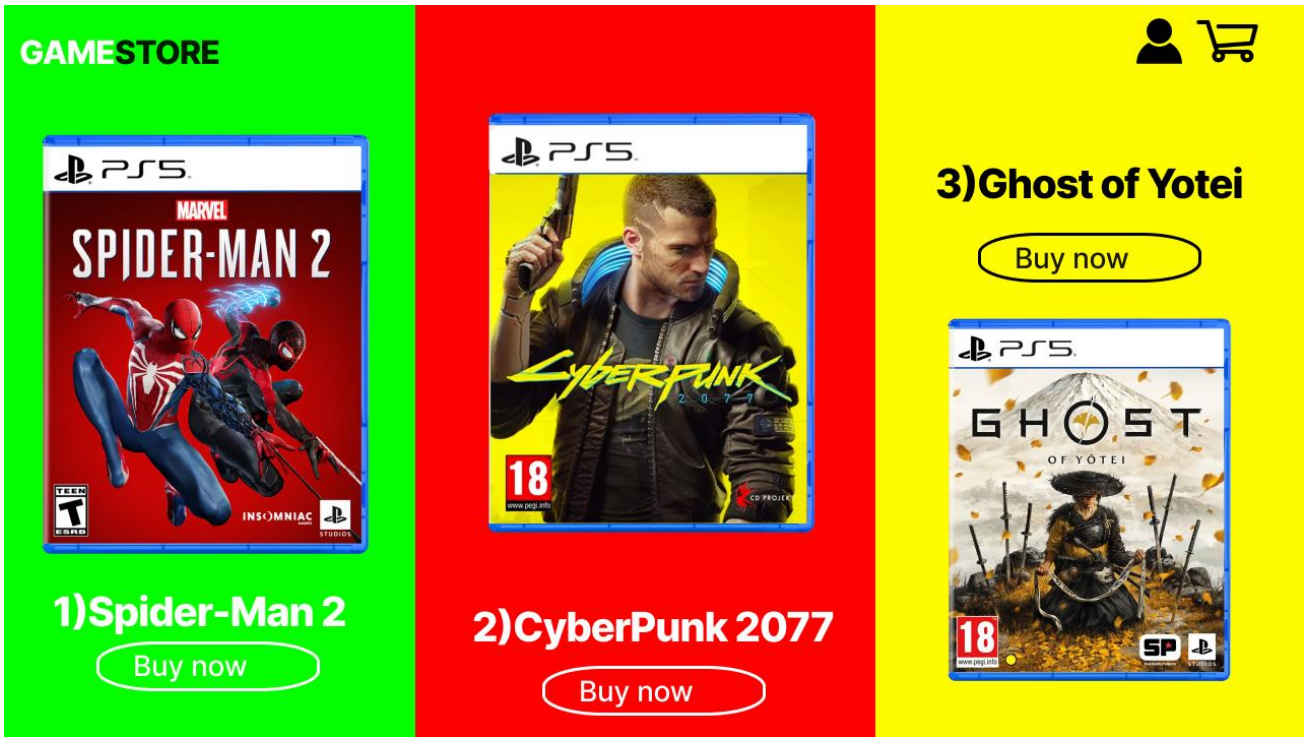
USER INTERFACE AND DESIGN

Name: Pranav Shanmugam **Roll.No: 240701395**

Exp-1: Comparison of UI design between 2 figma creation

Bad website:

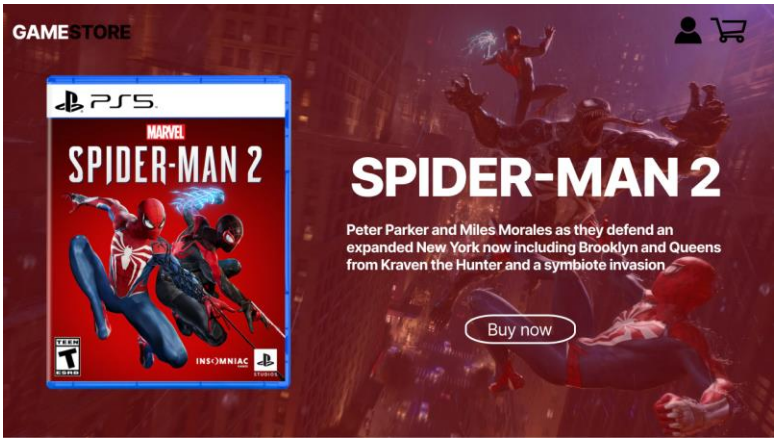


1. Design Style: Uses overly bright and clashing background colors, which makes the layout feel chaotic and unprofessional. The product cards don't visually blend, reducing overall aesthetic appeal.

2. Content: Important details like game titles and prices compete with strong background colors, making them harder to scan quickly. The user's attention gets distracted instead of guided.

3. Navigation: “Buy now” buttons lack consistent placement and contrast, so they don’t immediately attract attention. Users may feel confused about where to click first.
4. Purpose: While eye-catching, the design focuses more on loud visuals than usability. It grabs attention but is less effective in guiding users toward confident purchase decisions.

<u>Good website</u>:



1. Design Style: Uses cohesive color schemes and themed backgrounds that match each game, making the layout visually appealing. The products stand out clearly and feel premium and immersive.

2. Content: Text is well-placed with proper contrast, making titles and descriptions easy to read at a glance. Information is structured to guide the user's attention naturally.
3. Navigation: "Buy now" buttons are clearly visible and consistently positioned, encouraging quick action. Users can easily understand where to click without hesitation.
4. Purpose: Designed to highlight the games and create emotional engagement. Effectively supports purchasing by combining aesthetics with clear usability.w

Key Difference:

1. **Visual Clarity:** Bad design uses harsh, mismatched colors that distract users, while good design uses balanced, themed visuals that highlight the product and improve focus.
2. **User Action:** In bad design, call-to-action buttons are easy to miss, whereas in good design they are prominent and guide users smoothly toward making a purchase.
