Experiment – 5

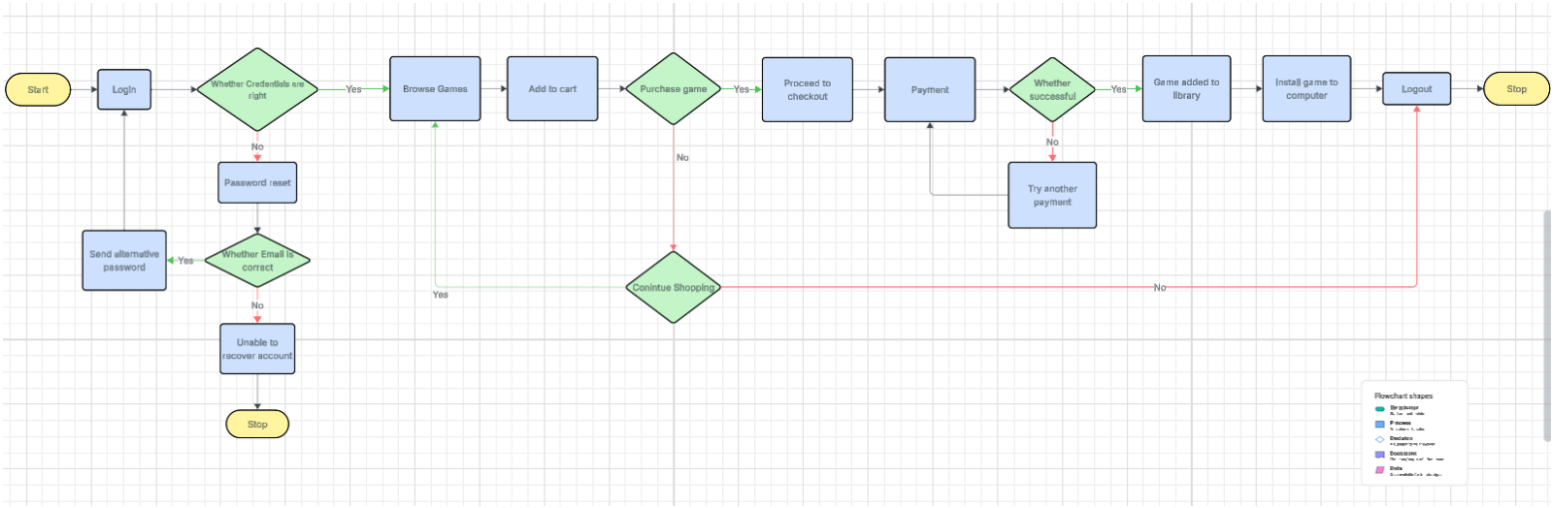
Name: Pranav Shanmugam
Roll No: 240701395

Aim

To do task analysis for a game marketplace app and understand the user flow. Also to create wireframes using Lucidchart.

Task Analysis

- Login into the app
- Browse games
- Add games to cart
- Buy games
- Make payment
- See purchased games in library
- Install the game
- Logout



User Flow

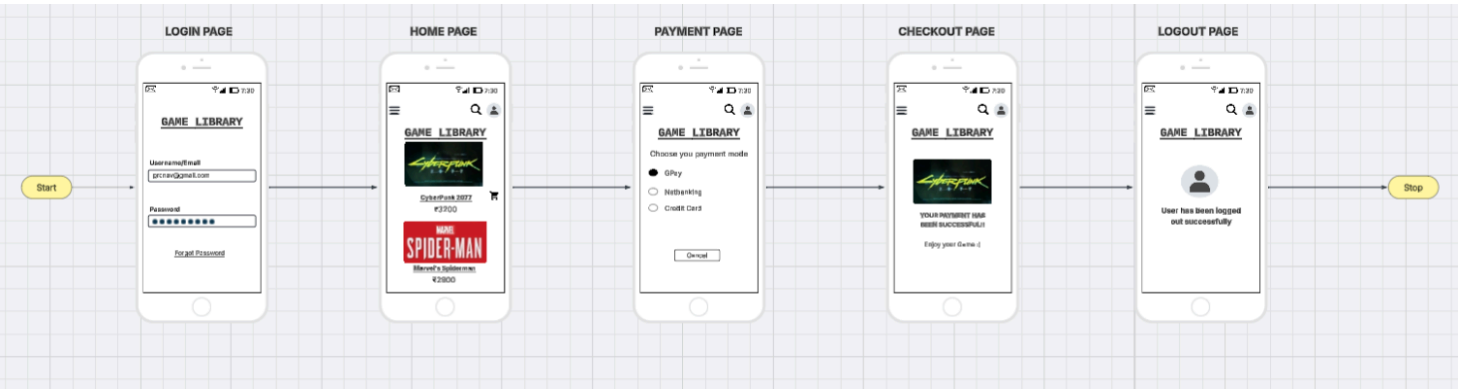
User Flow shows how the user moves from one step to another in the app.

1. The user starts and opens the login page.
2. If correct, user goes to browse games. If wrong, user goes to password reset.
3. If email is correct, a new password is sent. Otherwise, account cannot be recovered.
4. User browses games, adds to cart and buys.
5. User proceeds to checkout and makes payment.
6. If payment is successful, game is added to library. Otherwise, retry payment.
7. User installs the game and logs out.

Wireframe Design

- Login Page
- Home Page
- Payment Page
- Checkout Page
- Logout Page

The wireframes are simple and not very detailed. They just show the basic layout of the app.



Tools Used

Lucidchart

Conclusion

This can be used to understand how the user moves inside the app. The flow diagram helped to see all steps clearly. Wireframes helped to get an idea of how the app screens will look. This makes it easier to design the app properly.
